## Foreword

After his world championship match in 2013, Magnus Carlsen was not only the world's highest rated player, but he was 60 points ahead of his closest rival. It was a stunning phenomenon considering how even in Garry Kasparov's great years his rating was only modestly higher than Anatoly Karpov's.

But what can we make of Wilhelm Steinitz? For nearly 20 years he was clearly the world's best player. But the difference between him and the No. 2 player was typically well over 100 points, according to retroactive ratings.

For example, he was a staggering 139 points better than former world champion Adolf Anderssen, the No. 2 player in 1871, according to the Chessmetrics web site. And after Steinitz crushed Joseph Blackburne in a 7-0 match wipeout in 1876, the distance between him and the next highest rated player in the world was 186 points.

To put that in a bit of perspective, Bobby Fischer was a mere 125 points better than anyone else in 1972 and Mikhail Botvinnik was just 122 points ahead of the pack when he dominated in 1945, according to Chessmetrics.

Wherein lays Steinitz's superiority? The easy answer is "better opening preparation." That has been a major advantage for other champions, like Mikhail Botvinnik and Alexander Alekhine, and it explains how many of the elite players of the 21st century remain on top.

There is ample evidence that Steinitz was confounding his opponents in the 1870s and 1880s with theoretical innovations just as top GMs do today. But Steinitz managed to do it at move six and seven, not at 16 or 17.

True, his hard-headed attempts to refute major openings, such as the Evans Gambit and Scotch Game, look odd through modern eyes. But other Steinitz innovations remain valid. If Black doesn't like meeting the Ruy Lopez, 1.e4 e5 2.♟f3 ♞c6 3.♞b5, with the popular 3...a6, his best bet may be Steinitz's 3...d6.

To fully appreciate his greatness, we have to use different measuring tools. Today's players are evaluated by their most recent tournament results. But Steinitz played many more matches (35) than tournaments (25) and his great tournament results, such as Vienna 1882, were few. (Steinitz lived in an era in which the champion was expected to win every tournament he entered. When he failed to take first prize at London 1883, it prompted fans to arrange a match with the winner, Johannes Zukertort, in what turned out to be the first official world championship.)

If we think of his achievements as a writer, not just as a player, Steinitz was unique. Howard Staunton was the only author and journalist before him that comes close. And none of his great successors could match his versatility and output.

Steinitz wrote a great tournament book – like Emanuel Lasker, Alexander Alekhine and Mikhail Botvinnik. But he also edited a great magazine. Only Lasker among the other champions can make that claim. And Steinitz also wrote a great instructional book – like Capablanca and Lasker. He introduced or popularized many of the terms we take for granted, including: theoretical continuation, blunder, hole, initiative, book position and transposition of moves.

Few of his great successors could claim to be accomplished chess journalists. Emanuel Lasker, Karl Schlechter and Mikhail Tal come to mind – but in reading Isaak and Vladimir Linder’s splendid biographical work, you may be surprised by some other aspects of Steinitz’s chess life. He played blindfold games, for example, and could solve even Sam Loyd’s intricate problems in minutes. Karsten Müller’s annotations add considerable depth to the original Russian-language version of this work. For example, he points out the faster wins in game 18, the missed opportunity in game 19, among others.

Steinitz had a remarkable private life, marked by the tragically early death of his daughter and his first wife, his second marriage, to a woman 28 years younger than him, and becoming a father again at age 61. His final years of poverty and mental problems could not have been happy. It is touching that his death certificate lists one of the causes as “acute melancholia.”

Let’s let Aron Nimzovich have the last word: “Steinitz had probably only one imperfection – that he was about 50 years, at least, ahead of his generation!”

Andy Soltis

**Steinitz-Gunsberg Match, 1890/1891**

This match (December 9-January 22, New York) was organized by the Manhattan Chess Club. It was a best-of-20 match, with an unusual time control: 1 hour 45 minutes for 26 moves, then one hour for each subsequent 15 moves. The stake was \$375. Steinitz agreed to the match with Isidor Gunsberg after Gunsberg had a number of successes in international tournaments and a drawn match with Mikhail Chigorin (1890: +9 -9 =5). The arbiter of the match was a well-known patron, Prof. I. Rice, the inventor of the gambit of the same name that was tested in a thematic match between Emanuel Lasker and Mikhail Chigorin. Unlike impatient Zukertort and implacable Chigorin, Gunsberg fought against the world champion with his own weapon, positional play. In the beginning of the match, Steinitz quite often resorted to risky experimentation. Thus, in the first game, in the Queen's Gambit, 1.d4 d5 2.c4 e6 3.♖c3 ♗f6 he surprised his opponent with the extravagant move 4.f3. Chigorin wrote that "playing with a weak player, it is possible to resort to such moves for fun." The game ended in a draw on the 25th move. Steinitz won the second game because of his opponent's blunder, and, in the third game, he again played f3, this time on the 5th move. Black obtained an advantage but was not able to convert it. In the 4th and 5th games, the world champion left his king in the center; Gunsberg punished him both times for the unjustified risk.

Steinitz stopped his experiments only after reaching a minus score of 2-3, and, in the next part of the match, he was much more successful, scoring 4-1. Gunsberg, as a rule, played the Italian Game with White; Steinitz played the Queen's Gambit. After 11 games, the score was 6½-4½ in favor of the world champion. In the twelfth game, Steinitz chose a critical continuation in the Evans Gambit, in which he had lost in the telegraph match against Chigorin. After winning this game (see the game in *Gunsberg*), the Hungarian master reduced the score difference to the minimum possible. In the thirteenth game, Steinitz restored his advantage to two points. In the subsequent four games, he again persistently played the Evans Gambit, finishing with a score of one win, one loss, and one draw in the opening. The nineteenth, and last, game of the match ended in a draw and brought victory to Steinitz with the score 10½-8½. Steinitz's best win was in the seventhth game.

After the match, Siegbert Tarrasch observed that "Gunsberg was Steinitz's first opponent to fight him with Steinitz's own weapon. Even though he did not defeat Steinitz, he demonstrated that Steinitz can be defeated."

**Steinitz-Chigorin Match, 1892**

The second Chigorin match (January 1-February 28, Havana) was organized by the Havana Chess Club. The match was to be played until one of the participants accrued ten wins, the stake was \$2,000, and the time control was two hours for 30 moves and then one hour for each subsequent 15 moves. In case of a 9-9 finish, an additional match awarded to the first player to reach three wins was to be played. Chigorin won the first game to take the lead. The second and third games ended in draws. The newspaper *Novoye Vremya* published correspondence from Havana about the beginning of the match:

*The first move in the first game of a big chess competition between the two strongest players of our time was made on January 1 at 2:30 PM. The match is taking place in the new luxurious club Centro Asturiano. The electric lamps from Paris alone cost almost \$14,000. A table for the two players and two assistants is on a low platform, separated with a barrier; a large demonstration board is mounted vertically for the public to watch the game. There are chess tables in the hall for the spectators to analyze each move made by Steinitz or Chigorin; the noise does not reach the players, who are far enough from it so that it does not interfere with their concentration.*

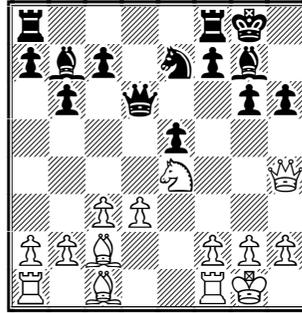

*In the first game, Chigorin got White. As everyone expected, he chose to*

play the Evans Gambit. On the 19th move, after thinking for 15 minutes, Chigorin sacrificed a knight. This move was quite unexpected; it caused a commotion among the spectators; a rumble went from one end of the hall to the other; many players, even strong ones, doubted that the sacrifice was correct. On the 25th move, the game was adjourned for dinner. Then, after dinner, on the 31st move, Steinitz resigned. The club Centro Asturiano is probably the largest and the richest in America, with over 5,000 members. It is not a specifically a chess club. The match was organized there because the Havana Chess Club was not large enough.

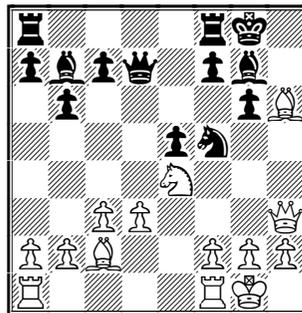

The *British Chess Magazine* reported that “if Steinitz is destined to be defeated by Chigorin, he could not be defeated by a more worthy opponent.” In this match, neither of the contenders could get ahead; Steinitz won the fourth and the sixth games, and Chigorin won the seventh, eighth and the tenth games. From the fifteenth game to the twentieth, each player won every other game, with White. Chigorin did not abandon his favorite weapon, the Evans Gambit (only once did he choose the Ruy Lopez), with an excellent result four wins, one loss, and three draws. Steinitz also played 1.e4 and, while Black was able to defend fairly well in the sharp Two Knights’ Defense, in the strategic Ruy Lopez, Steinitz’s advantage was obvious (+4 - 0 = 1).

 has lost a superlative game and  
 missed his opportunity to even the

## Wilhelm Steinitz: First World Chess Champion

*Steinitz-Chigorin, World Championship Match, Havana 1889*

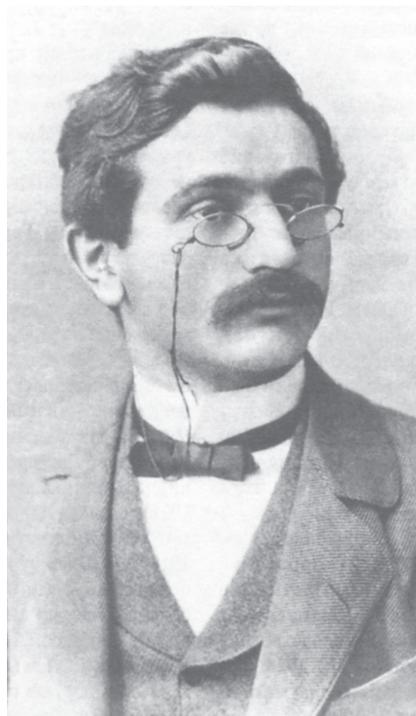

*score. In that case, according to the regulations, the match would have continued until one player accumulated 12 wins. Who knows what would have happened? We will be hard-pressed to forget this important moment. More than a thousand spectators witnessed the twenty-third game; everyone commented on Chigorin's brilliant play. We were expecting that Steinitz would resign any minute. Then, suddenly, there was unusual excitement; people would rise, everybody could see how the Russian master; nervous, with his facial expression changing, lifted his hands to his head in horror. He needlessly moved his bishop protecting him from the checkmate. "What a pity," repeated hundreds of voices, "What a depressing and awful end to a magnificent match for the world championship!" Chigorin can be justly proud: never before was Steinitz so close to defeat as now.*

Steinitz won the match (+10 -8 =5).

**Emanuel Lasker** (December 24, 1868, Berlin – January 11, 1941, New York) was the second world chess champion. Emanuel showed extraordinary mathematical abilities in early childhood, multiplying two-digit numbers in his head. At the age of 11, he moved to Berlin to live with his older brother Berthold, who was a medical student at the time, as well as one of the strongest chessplayers in Berlin. When Emanuel got measles, his brother taught him how to play chess.

In the spring of 1888, Lasker finished school and entered the Department of Philosophy of the Berlin University. In the winter, he won all of his games in his first tournament, at the Café Kaiserhof. The next year, he became a master after winning a side tournament of the German Chess Congress. Victories in matches against famous chessplayers of the time such as Curt von Bardeleben, Jacques Mieses, Henry Bird, and Berthold Englisch placed 22-year-old Lasker among the leading Eu-

ropean masters. He had outstanding successes in London, where Emanuel won a double-round tournament (1892) and matches against Joseph Blackburne and Henry Bird without losing a single game, and these helped his confidence. Lasker got the ambitious dream of becoming a world champion. A year later, he came to the United States, and, after winning the New York tournament (13 points out of 13!), Lasker challenged the world champion to a match. Wilhelm Steinitz accepted his challenge. The match, played to ten wins (draws did not count), took place in 1894. It was a heated battle. The New York part of a match was like a seesaw: Lasker won the first game, then Steinitz won, then again Lasker, then again Steinitz. After six games, the score was 3-3. The seventh game was the tipping point. Steinitz lost even though he had an advantage in the middlegame. Lasker led and did not let up until the end of the match. He scored his tenth win in the 19th game (+10 -5 =4). Thus, Lasker became world champion at the age of 25!

*Emanuel Lasker*

the other prize winners by 4½(!) points, and in St. Petersburg and Paris, by two points.

 The main line is 4.fxe5 ♘xe4 5.d3.  
**4...♘c6 5.fxe5 ♘xe5 6.d4 ♘g6**  
**7.exd5?! Critical is 7.e5. 7...♘xd5**  
**8.♘xd5?! ♙xd5 9.♗f3 ♖g4**  
**10.♖e2 0-0-0 11.c3 ♖d6 12.0-0**  
**♜he8 13.h3 ♖d7 14.♗g5?** This  
 runs into a spectacular counter; 14.♖d3  
 is more circumspect. **14...♗h4**  
**15.♗f3 (D)**

Later, Lasker confirmed his reputation as the world's best chessplayer in a number of the largest international tournaments. Except for Hastings (1895, third place), he convincingly won the first prizes in St. Petersburg (1895/1896), Nuremberg (1896), London (1899), and Paris (1900), with the participation of the other strongest players of the time, such as Tarrasch, Pillsbury, Chigorin, Blackburne, Charousek, Marshall, Schlechter, and Janowski. In the London double-round tournament, Lasker finished ahead of
